

Review report

Review object (topic):	Topic 16
Version:	Februar 19, 2003
Reviewer:	Zoran Putnik
Date:	September, 2003

1. General remarks and general impression concerning the state of the review object

I hope that this topic is AFTER, but very close to “Seminar Organization” discussion. Even though it’s extremely short, it’s very concerned with it, it explains everything through that example, so it’s bad if students do not know it.

2. Contents errors and misspellings in the slides

Slide 15: “... help functions, local functions WHICH are called ...”. Word WHICH is extra.

Slide 16: “...read registration DATE...”. It should be DATA instead of DATE.
(e.g. wrong contents)

4. Slides with a bad style and suggestions for improvements

Picture and story about Edward Yourdon appears at slide 7. In other topics, this kind of slide is usually at the beginning.

6. Lecture notes for particular slides:

I’m not clear about LN at slide 10. What’s “arrow state”?

At slide 13 in LN, it says “... data base seminars and clients ...” instead of “...data base and customers...” as it’s written in the slide.

8. Deviations from the style guides

Slide 15 doesn’t have a fullstop at the end of the sentence, but still second and third notions begin with capital letter.
